HTA for Public Health Interventions

addressing the challenges of complexity and uncertainty

IG INPHORM – Panel Questions

Panelists

Beth Shaw (UK)

Ansgar Gerhardus (D)

Carlo Favaretti (I)

Iñaki Gutiérrez-Ibarluzea (S)

Moderator

Irene Lenoir-Wijnkoop (NL/F)

HTAi 2017 Annual Meeting Rome, Italy
ILW - IG INPHORM

Panel questions (I)

what would be required to maximise the chance of meaningful policy translations from HTA outcomes into PH recommendations?

- how much/what kind of evidence is needed before investing in complex (low tech) medicine and public health issues related to lifestyle?
- how to develop a robust & comprehensive framework to combine scientific evidence with rationalism and empiricism?

Panel questions (II)

- how could qualitative and participative methods be integrated in HTA/which rules should be set to generate robust "linked evidence" in the evaluation of complex interventions?
- given the irreducible areas of uncertainty, what kind of methodologies would ensure an optimal reliability of HTA projections (based on modelling and the use of intermediate outcomes)
