

Jani Mueller

Jani Mueller is a Senior Researcher at Charlotte Maxeke Medical Research Cluster, CMeRC in Johannesburg. She currently holds a faculty position with University of Pretoria in South Africa. Over the last decade she has gained practical experience in evaluating medical devices as part of her work with the CMeRC team and shares her experience through training. Her research focuses on advancing the methods used in the area of medical device assessment to enhance its usefulness in the context of real-world decision-making, which involves taking a life-cycle approach to medical technology assessment. Jani nurtures a keen interest in building competencies and education and training in HTA, especially in emerging settings. She has published and co-authored a number of articles, contributed to book chapters and presented her research findings to an array of scientific audiences. Currently, she is also a doctoral candidate at the Technical University of Berlin.
